(or click here to download)

---

High precision load positioning, vertically and horizontally – using one crane

Reduces the risk of damage from oscillations due to sudden crane starts/stops

Vastly improving operating speed and worker safety

Turn lifting into high accuracy hoisting and load positioning system

High accuracy (+/- 1,0 mm)

Double-acting push/pull cylinders with parachute valves for added safety in case of hose rupture or coupler damage

Cost reduction when compared to conventional load positioning methods

Three options for system management & control:

1. manual: stroke control, system warning functions
  2. extended manual: stroke control, load and stroke display, system warning functions
  3. PLC-control: fully monitorized system, programmable functions using touch screen, wireless remote control, system warning functions.
