

Machinist Files - CORINOX® Files for Stainless - CORINOX® Half Round

CORINOX® - machinists files are designed for use on stainless steels and exotic alloys. With a surface hardness of 1200 HV, these files offer excellent wear resistance and long service life. Their stainless steel surface leaves no corrosive residue on the work piece and effectively resists loading.

Half Round CORINOX® files are used for filing out concave surfaces and crevices, and for rounding out holes.

EDP	Name	Length	Width	Thickness	Cut
