

## Machinist Files - CORINOX® Files for Stainless - CORINOX® Three Square

CORINOX® - machinists files are designed for use on stainless steels and exotic alloys. With a surface hardness of 1200 HV, these files offer excellent wear resistance and long service life. Their stainless steel surface leaves no corrosive residue on the work piece and effectively resists loading.

Three Square CORINOX® Files are triangular in cross-section, are double cut and have fairly sharp corners that are slightly set and cut. These files are for general use by machinists for filing internal angles more acute than the right angle, for clearing out square corners and filing taps and cutters.

EDP	Name	Length	Width	Cut
