

Machinist Files - Key files - Three Square

Similar to Warding Files, Key Files are very thin in thickness. Their big advantage is that they are manufactured in all popular machinists file shapes. Double cut. Designed specially for use in locks and keys, they are also well-suited for use by electricians, mechanics and anyone engaged in precision work.

Three Square shape Key Files are triangular in cross-section and have fairly sharp corners that are slightly set and cut. The shape lends itself toward filing internal angles more acute than the right angle, for clearing out square corners and filing taps and cutters.
