

Unbonded tendon fabrication lines

Enerpac Precision SURE-LOCK[®] builds machines to suit the needs of the client. We manufacture 2-, 3-, and 4-tub lines depending on the customer's preference. SURE-LOCK[®] lines automatically measure and shear the strand, giving accurate length control. Single or dual pay-offs can be provided, making material changes swift and easy. Leveraged hydraulic shears provide clean end cuts of 0.50" and 0.60" PC strand. Easy access to rotate or change shear blades minimizes down-time, and multi-track drive belts reduce expense. Local or remote data input is available. SURE-LOCK[®] delivers quality, durability, and customer support in our complete line of equipment.
